Website: www.merc.gov.in

MAHARASHTRA ELECTRICITY REGULATORY COMMISSION (GRID INTERACTIVE ROOFTOP RENEWABLE ENERGY GENERATING SYSTEMS) REGULATIONS, 2019

STATEMENT OF REASONS

Dated:30 December, 2019

Introduction

The Maharashtra Electricity Regulatory Commission (MERC or Commission) notified the MERC (Net Metering for Roof-top Solar Photo Voltaic Systems) Regulations, 2015 [hereinafter referred as MERC Net Metering Regulations, 2015] in September 2015. The Commission notified the first amendment to MERC Net Metering Regulations, 2015 in July 2017, and extended the scope of the Regulations to all grid connected Renewable Energy (RE) Generating Systems.

The Commission formulated the draft MERC (Grid Interactive Rooftop Renewable Energy Generating Systems) Regulations, 2019 (hereinafter referred as "Draft Grid Interactive Rooftop RE Regulations, 2019").

While formulating the Draft Grid Interactive Rooftop RE Regulations, 2019, the Commission has been guided by the FOR-Model Regulations, 2019, relevant Regulations of this Commission and Regulations specified by other State Electricity Regulatory Commissions (SERCs) etc., as well as Petitions filed by different entities seeking modifications in the MERC Net Metering Regulations, 2015.

The Commission has proposed modifications in the draft to certain clauses vis-à-vis the clauses specified in the MERC Net Metering Regulations, 2015 (as amended in July 2017) based on

the experiences in implementation of the Net Metering Regulations, and in order to simplify/clarify/amend certain provisions as considered reasonable. The rationale for the changes proposed were elaborated in the Explanatory Memorandum published along with Draft Grid Interactive Rooftop RE Regulations, 2019. Generally, only clauses where any addition/modification is proposed in draft Regulations were discussed in Explanatory Memorandum. In the draft Grid Interactive Rooftop RE Regulations, 2019, the Commission has endeavoured to balance the interest of consumers, RE Generating Companies, and Distribution Licensees. Based on the analysis, possible regulatory options have been discussed in the Explanatory Memorandum.

Accordingly, the draft Grid Interactive Rooftop RE Regulations, 2019 along with Explanatory Memorandum was published on the Commission's website www.merc.gov.in in downloadable format on October 26, 2019. A Public Notice was also published in daily newspapers Marathi (Maharashtra Times and Loksatta) and English (Indian Express and Times of India), inviting comments, objections and suggestions from all stakeholders by November 18, 2019, which was subsequently extended till November 25, 2019 in order to encourage public participation in the process of framing of these Regulations. A total of around 3800 stakeholders responded to the Notice on the Draft Grid Interactive Rooftop RE Regulations, 2019. The Commission appreciates the efforts taken by large numbers of stakeholders in providing their comments/suggestions, which has helped the Commission in finalising these Regulations. The list of stakeholders who offered their comments/suggestions on the draft Regulations and Explanatory Memorandum, which have been considered by the Commission while finalising the Regulations, is placed at Annexure-I.

The main comments and views expressed by the stakeholders through their written submissions and the Commission's views thereon have been summarized in the following paragraphs. It may be noted that all the suggestions given by the stakeholders have been considered, and the Commission has attempted to elaborate all the suggestions as well as the Commission's decisions on each suggestion in the Statement of Reasons, however, in case any suggestion is not specifically elaborated, it does not mean that the same has not been considered. Further, some stakeholders have suggested changes on Syntax/phrase/addition of word(s)/rewording related changes, cross-references, etc., which have been suitably incorporated, wherever necessary.

Wherever possible, the comments and suggestions have been summarised clause-wise, along with the Commission's analysis and ruling on the same. However, in some cases, due to overlapping of the issues/comments, two or more clauses have been combined in order to minimise repetition.

The Commission has also made certain suo-motu consequential changes in order to ensure consistency between clauses. Also, it may be noted that the Regulation numbers given in this Statement of Reasons are those mentioned in the draft MERC Grid Interactive Rooftop RE Regulations, 2019. The Commission has also made the corresponding changes in Annexures to the Regulations.

The SOR is organised in such a way that it is summarising the main issues raised during the public consultation process, and the Commission's analysis and decisions on them which underlie the Regulations as finally notified.

The detailed Clause-wise approach is discussed as under:

1.1 Short title, extent and commencement

1.1.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"1.1 These Regulations may be called the Maharashtra Electricity Regulatory Commission (Grid Interactive Rooftop Renewable Energy Generating Systems) Regulations, 2019.

... "

1.1.2 Comments Received

Prayas Energy Group suggested to add an additional Clause 1.4 regarding the operating period of the Regulations, which could be for five years, thus, providing regulatory certainty to all stakeholders. It will also ensure revision of Regulations with likely changes in technologies and market developments.

Maharashtra State Electricity Distribution Co. Ltd. (MSEDCL) submitted that the period of 3-4 years is sufficient time for the consumers to make the necessary arrangement for migrating to new Rooftop RE Regulations and also enable the consumer to recover the investment within such period. It is suggested that RE Generating Systems, which were commissioned during the applicability of the MERC Net Metering Regulations, 2015, shall continue to be governed by the aforesaid Regulations only for a period of 3 years from the date of applicability of the MERC Grid Connected Rooftop RE Regulations, 2019 and not till the validity of Agreement. Also, in case of enhancement of RE system already installed by Eligible Consumer under MERC Net Metering Regulations, 2015, the provisions of new Regulations shall be applicable.

Priya Mahajani and Others requested to clarify that the existing Net Metering contracts will continue as per existing Regulations until they expire and will not have any new commercial conditions attached to them after finalization of the present Draft Regulations. They suggested that the above clause could be in line with Regulation 38.3 of MERC (Distribution Open Access) (First Amendment) Regulations, 2019.

Some stakeholders suggested that the provisions of the MERC Net Metering Regulations, 2015 should be made applicable for all Applications submitted to and duly acknowledged by the Distribution Licensee.

1.1.3 Analysis and Commission's Decision

As regards the request for clarity that the existing Net Metering contracts will continue as per existing Regulations until they expire, the same is already specified in the Draft MERC Grid Interactive Rooftop RE Regulations, 2019, under Proviso to Clause 20, as under:

"Provided that Renewable Energy Generating Systems commissioned during the applicability of the Maharashtra Electricity Regulatory Commission (Net Metering for Rooftop Solar Photo Voltaic Systems) Regulations, 2015, shall continue to be governed by the aforesaid Regulations till validity of the Agreement signed under the aforesaid Regulations."

Hence, no further clarification is required on this aspect.

As regards the suggestion that the provisions of the MERC Net Metering Regulations, 2015 should be made applicable for all Applications submitted to and duly acknowledged by the Distribution Licensee, the MERC Grid Interactive Rooftop RE Regulations, 2019 shall come into force from the date of publication in the Official Gazette. The Commission is of the view that it would not be appropriate to make the MERC Grid Interactive Rooftop RE Regulations, 2019 applicable to installations that are already in place. Hence, the Regulations shall have prospective effect. However, in order to avoid ambiguity in interpretation the nature of prospective effectiveness, viz., commissioned plants or Applications received or Applications accepted, etc., the Commission has added a Clause specifying that these Regulations shall be applicable to all Grid Interactive installations for which Applications are received on or after the notification of these Regulations. Thus, the MERC Net Metering Regulations, 2015 will be applicable for the pending applications. This is a significant concession, as normally new Regulations are applicable for all generation facilities that are commissioned after the date of notification of the Regulations. However, in this case, considering the time needed after the submission of application for the agencies for securing financial closure, procuring the material, installing the system and getting that duly vetted by Licencee, the Commission has decided that the existing Regulations shall be applicable even for pending applications, wherein the projects would be commissioned after the notification of the MERC Grid Interactive Rooftop RE Regulations, 2019.

As regards increase in capacity of existing RE generating system, the consumer has to apply and enter into new agreement for total enhanced capacity. If such application is subsequent to notification of these Regulations, then provisions of MERC Grid Interactive Rooftop RE

Regulations, 2019 would be applicable to the complete installation (old as well as the enhanced capacity).

As regards the suggestion to have a finite period for effectiveness of these Regulations, the MERC Net Metering Regulations, 2015 did not have any end-date for applicability and has served its purpose well. The Commission initiated suo-motu review of the Regulations on accounts of reasons elaborated in the Explanatory Memorandum. Hence, the Commission does not think it fit to specify any end date for these Regulations.

Accordingly, the following Clauses have been added under Regulation 3: Scope and Applicability:

"3.2 These Regulations shall be applicable to all Grid Interactive installations for which Applications are received on or after the notification of these Regulations."

1.2 Regulation 2.1(i): Definition of Eligible Consumer

1.2.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"2.1(i)"Eligible Consumer" means a consumer of electricity in the area of supply of the Distribution Licensee who uses or intends to use a Renewable Energy Generating System having a capacity less than 1 MW, installed on a roof-top or any other mounting structure in his premises, to meet all or part or no part of his own electricity requirement, and includes a Consumer catering to a common load such as a Housing Society:

Provided that such Generating System may be owned and/or operated by such Consumer, or by a Distribution Licensee or third party leasing such System to the Consumer:

Provided further that in case of Net Billing Arrangement, the capacity limit of 1 MW shall not apply;"

1.2.2 Comments Received

Prayas Energy Group suggested that the limit of 1 MW for Net Metering Consumers should be done away with as long as the upper limit for such systems is the Contract Demand or Sanctioned Load. Such limit has been done away with in the Net Billing arrangement. Further, many SERCs in States like Rajasthan, Delhi, Telangana, Madhya Pradesh, Punjab, etc., allow third party ownership systems. There is no restriction that such systems can only be leased to the Eligible Consumer. This will avoid un-necessary creative contract structuring to bypass such restrictions.

MSEDCL submitted that in the definition of Eligible Consumer, the meaning of "his premises" should be clearly defined as the premises where the RE system for a given consumer is installed and energy generated in the same premises for same connection.

The Tata Power Company Limited (TPC) suggested that as solar capacity is denominated in DC voltage and is denoted in kWp, the Commission should include the term 'AC' after 1 MW, for ample clarity.

1.2.3 Analysis and Commission's Decision

The Commission is of the view that the RE Generating system has to be either owned by or leased to the consumer, in order for the consumer to be eligible for Net Metering or Net Billing Arrangement. Third-party ownership without any linkage to the consumer may lead to complications such as applicability of provisions of Open Access Regulations.

As regards the suggestion to relax the limit of 1 MW for Net Metering Arrangement, the Commission is of the view that the limit of 1 MW is appropriate, and it may not be advisable to relax the limit at this point in time. In later part of this SoR, the Commission has explained the implications of Net Metering Arrangement.

As regards the request to further enhance the definition of "premises", the Commission clarifies that the premises for consumer connection and the premises where RE generating system are to be installed, shall be the same. However, there is no need to modify the definition of 'premises', as the definition of premises, and RE Generating Systems have to be read together.

As regards the suggestion to include the term 'AC' after 1 MW, the Commission is of the view that since this is grid connected, it is by default denominated in AC, hence, there is no need to clarify the same.

Hence, no modification has been made to this Clause.

1.3 Regulation 2.1(j): Definition of Generic Tariff

1.3.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

""Generic Tariff" means the Generic Tariff approved or adopted by the Commission for generation from different Renewable Energy sources in accordance with the Maharashtra Electricity Regulatory Commission (Terms and Conditions for Determination of Renewable Energy Tariff) Regulations, 2015, or as amended from time to time;"

1.3.2 Comments Received

The Maharashtra Energy Development Agency (MEDA) and Others submitted that the Explanatory Memorandum acknowledges the benefits of distributed RE sources. However, the same has not been considered while defining the 'Generic Tariff'. Even the provisions of MERC (Terms and Conditions for determination of Renewable Energy Tariff) Regulations, 2015, or the proposed Draft MERC (Terms and Conditions for determination of Renewable Energy Tariff) Regulations, 2019 have not captured these issues. Hence, it is requested to specify a formula for Generic Tariff, which captures all the benefits of distributed generation and also the higher costs associated with rooftop solar systems as per prevalent market conditions.

1.3.3 Analysis and Commission's Decision

In the draft Regulations, the Commission had proposed to allow Net Billing for all categories and Net Metering only for residential category up to 300 units consumption per month. Hence, in the Explanatory Memorandum, the Commission had proposed to determine higher Generic Tariff to account for the benefits of distributed generation.

As elaborated subsequently, the Commission has now allowed Net Metering to all consumer categories without any consumption limit, and has allowed the energy generated from Net Billing installations at the Average Power Purchase Cost (APPC), which is generally higher than the Generic Tariff. Now, with the removal of consumption limit of 300 units for Residential category and allowing Net Metering for other categories, the consumers will be able to set off their entire consumption against their self-generation, and they will already be benefiting significantly from this modification. Hence, there is no justification to give any further additional benefit through determining a higher Generic Tariff.

The Commission has hence, continued with the existing definition of Generic Tariff and the same shall be determined as per MERC (Terms and Conditions for Determination of Renewable Energy Tariff) Regulations, 2019, or as amended from time to time.

Further, the Commission has added the definition of APPC as under:

"(b) "Average Power Purchase Cost" or "APPC" means the weighted average price at which the Distribution Licensee has purchased or is expected to purchase electricity (excluding procurement from RE sources and liquid fuel sources), including the cost of self-generation, if any, as approved by the Commission in the relevant Tariff Order or any other general or specific Order;"

1.4 Regulation 2.1(k): Definition of Inter-connection Point

1.4.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

""Inter-connection Point" means the interface of the Renewable Energy Generating System with the outgoing terminals of the meter / Distribution Licensee's cut-outs/switchgear fixed in the premises of the Eligible Consumer:

Provided that, in the case of an Eligible Consumer connected at the High Tension ('HT') level, the 'Inter-connection Point' shall mean the interface of the Renewable Energy Generating System with the outgoing terminals of the Distribution Licensee's metering cubicle placed before such Consumer's apparatus;"

1.4.2 Comments Received

Think Energy and Others requested to allow metering for HT consumers at LT level, in order to avoid step-up requirement of the power. The step-up requirement has several constraints such as additional space, energy losses, etc. Madhya Pradesh and Andhra Pradesh have allowed LT termination and have no issues either in operations or in energy accounting. Hence, it is requested to add provision in the Regulations to the effect that if LT level termination is not technically feasible, then only HT level termination shall be done.

1.4.3 Analysis and Commission's Decision

The above Definition and the related Clause 6.4 specify that HT Consumers may install and connect RE Generating System at their LT Bus Bar System, provided that the Net Meter shall be installed on the HT side of the Consumer's Transformer. These have been retained same as specified in the MERC Net Metering Regulations, 2015 in the Draft Regulations.

The Commission is of the view that the above clauses are appropriate. The Net Meter has to be installed at the same point as the Consumer's normal energy meter. In case of HT consumers, the consumer meter is installed on the HT side of the transformer, and this rightly accounts for the transformation losses and downstream losses on the consumer. If the Net Meter is allowed to be installed on the LT side of the transformer, then the transformation losses will be passed on to the Distribution Licensee, which will be socialised and recovery of this additional cost will be from the other consumers, thereby disadvantaging the other consumers. Hence, the Commission has not modified these clauses.

1.5 Regulation 2.1 (v): Definition of Renewable Energy Generating System

1.5.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

""Renewable Energy Generating System" means the Renewable Energy power system installed on a Consumer's premises, and owned and/or operated by such Consumer or by a

Distribution Licensee or a third party, that uses Renewable Energy for conversion into electricity;"

1.5.2 Comments Received

Prayas Energy Group suggested modification of the definition of 'Renewable Energy Generating System' to include RE systems with or without energy storage.

1.5.3 Analysis and Commission's Decision

The Commission agrees with the suggestion and has accordingly modified the definition of RE Generating System as under:

"(w) "Renewable Energy Generating System" means the Renewable Energy power system with or without energy storage installed on a Consumer's premises, and owned and/or operated by such Consumer or by a Distribution Licensee or a third party, that uses Renewable Energy for conversion into electricity."

1.6 Regulation 2.1(w): Definition of Renewable Energy Generation Meter

1.6.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

""Renewable Energy Generation Meter" means an energy meter used for measuring the energy generated by the Renewable Energy Generating System for the purpose of accounting and billing:

Provided that a separate Renewable Energy Generation Meter shall be installed for each source of Renewable Energy in case of hybrid or combination of such sources;"

1.6.2 Comments Received

Prabhatkiran Sustainable Energy Private Limited submitted that hybrid (grid connected with Battery Storage) Solar systems have three sources, viz., Solar, Grid, and Battery. These systems have one output. There is bi-directional flow of power on the grid connection to the inverter. It takes power from grid to charge batteries and/or to supply to load and exports power generated from Solar PV to grid. Hence, it is requested to clarify the position of generation meter in such case.

MSEDCL submitted that there is an exponential growth in rooftop RE generation in the last 3 years. It is necessary to have a robust system to ensure the real time visibility and monitoring of rooftop systems in order to ensure grid stability and power procurement planning by the Distribution Licensee.

MEDA submitted that the proposed Draft Regulations are not clear in respect of DC output from any RE Source. It is requested to provide clarity regarding DC metering in Regulations

1.6.3 Analysis and Commission's Decision

In case of Hybrid projects, it is desired to meter the energy generation for each source separately. RPO compliance against each RE source has to also be considered separately. Further, the illustration cited does not amount to Hybrid Solar System, as Battery is not a source of power generation. Hybrid RE Project has to be based on RE technologies approved by MNRE, such as Wind-Solar Hybrid, Solar-Biomass Hybrid, Solar-Co-Generation Hybrid, Solar Thermal Hybrid, and any other combination of RE technologies.

Regarding the real time visibility and monitoring of rooftop system, the Commission notes that Regulations clearly specified that all meters, which are to be installed at the cost of concerned consumer must have Advanced Metering Infrastructure (AMI) facility with RS 485 (or higher) communication port. In order to have real time visibility and monitoring of consumption and RE generation at consumer end, adequate IT and allied infrastructure is required to be installed by the Distribution Licensee. The Commission appreciates the concerns of MSEDCL regarding the implementation of such system. Hence, the Commission allows the Distribution Licensees to come up with long-term capex / opex plan for implementation of real time visibility and monitoring at consumer end along with phase-wise implementation separately.

Further, the Commission is of the view that Regulations cover the grid connected RE Generating system, and since, grid is AC system, no further clarifications are required regarding DC metering.

Hence, the Commission has not modified this definition.

1.7 Regulation 3: Scope and Applicability

1.7.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"These Regulations would apply to:

- (a) Net Metering Arrangements;
- (b) Net Billing Arrangements;
- (c) Renewable Energy Generating Systems connected behind the Consumer's meter."

1.7.2 Comments Received

MEDA submitted that Regulation 3(c) specifies RE systems connected behind the consumer's meter apart from Net Metering Arrangement and Net Billing Arrangement. Also, the Regulation does not provide detailed treatment for the same. Further, the distinction between

Clause 3(a) and Clause 3(c) is not clear. It is possible that the Consumer has excess space on his roof/premises beyond his Sanctioned Load/Contracted Demand and the Consumer/third party wishes to install RE systems by utilizing the area. The Distribution Licensee should purchase electricity from such RE Projects as this would not only result in purchase of RE at a price much lower than the cost of power at distribution end but will also significantly reduce distribution losses. Hence, it requested to modify the treatment of RE Projects installed on the Consumer's roof/premises and not opting for either Net Metering or Net Billing Arrangement under various conditions as under:

- (a) Capacity greater than the sanctioned load/contracted demand and not opting for either Net Metering or Net Billing
- (b) Installation of such RE Projects by either Consumer or Third Party for options for sale of power to Distribution Licensee or any third party through open access.

TPC requested to incorporate commercial settlement for RE Generating Systems connected behind the Consumer's meter, as the same is not included in the Draft Regulations.

Prabhatkiran Sustainable Energy Private Limited and Others submitted that Off-grid RE Systems do not export power to the grid but use power from grid to charge batteries in case of unavailability of power from RE sources. The proposed Draft Regulations shall apply to such complicated systems. Hence, applicability should be specified as *Grid-connected Renewable Energy Generating Systems connected behind the Consumer's meter*.

1.7.3 Analysis and Commission's Decision

Service line and Distribution Mains, which connect the consumer premises with the Distribution System are designed to carry Sanctioned Load/Contract Demand. Same infrastructure is used by the Grid Interactive RE generating system to inject energy into the Grid. Hence, allowing RE generating system with capacity more than Sanctioned Load / Contract Demand is technically not feasible and hence, changes suggested by MEDA cannot be allowed. MEDA is suggesting third-party generator-procurer arrangement, which is not covered in these Regulations.

The Commission clarifies that there is no requirement for including the commercial settlement for RE Generating Systems connected behind the Consumer's meter, as such installations are those who have not opted either for Net Metering Arrangement or Net Billing Arrangement, hence, there is no commercial settlement. However, as provided in the Regulations such systems will be subjected to additional fixed charges.

However, the Commission agrees with the suggestion of stakeholders regarding the need to clarify the Cases of RE Projects connected behind the Consumer's Meter and has added the

words "Grid Connected" and "who have not opted either for Net Metering Arrangement or Net Billing Arrangement". Accordingly, Regulation 3.1 has been modified as under:

- "3.1 These Regulations would apply to:
 - (a) Net Metering Arrangements;
 - (b) Net Billing Arrangements;
 - (c) Grid Connected Renewable Energy Generating Systems connected behind the Consumer's meter, who have not opted either for Net Metering Arrangement or Net Billing Arrangement."
- 1.8 Regulation 4: General Conditions of Net Metering Arrangement and Net Billing Arrangement; Regulation 11: Net Metering Energy Accounting and Settlement; and Regulation 12: Net Billing- Energy Accounting and Settlement
- 1.8.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019
- "...4.2 The Eligible Consumer of the Residential category may set up the Renewable Energy Generating System under the Net Metering Arrangement.
- 4.3 The Eligible Consumer of all categories other than Residential category may set up the Renewable Energy Generating System only under the Net Billing Arrangement."
- "...11.4 The energy generated by the Renewable Energy Generating Station shall be offset against the energy consumption of the consumer from the Distribution Licensee in the following manner:
- a) The first 300 units generated during the billing period shall be netted out against the energy consumption of the consumer in that billing period:

Provided that if the consumer's consumption is less than 300 Units in that billing period, then the balance surplus generation from the first 300 units generated by the Renewable Energy Generating Station shall be considered as Banked Energy for adjustment in the subsequent billing periods.

b) Any units generated in excess of 300 units by the Renewable Energy Generating Station in the billing period shall be purchased by the Distribution Licensee at the Generic Tariff approved by the Commission for the respective technology in the Renewable Energy Tariff Order for the year in which the Renewable Energy Generation Project has been commissioned:

Provided that such amount shall be credited to the consumer in the same billing period and shall be used for reducing the billed amount for that billing period;

- c) In case the value of such excess Renewable Energy generation in a particular month is more than the value of all other components of the consumer's bill, such amount shall be allowed as Billing Credit to the consumer for adjustment in subsequent billing periods;
- d) The Banked Energy at the end of each Year, if any, shall be purchased by the Distribution Licensee at the Generic Tariff approved for the respective period by the Commission for respective technology in the Renewable Energy Tariff Order..."
- "...12.5 The Distribution Licensee shall enter into Power Purchase Agreement at the Generic Tariff approved for the respective period by the Commission for the respective technology in the Renewable Energy Tariff Order:

Provided that the Generic Tariff stipulated in the Power Purchase Agreement shall be constant for the entire duration of the Agreement.

12.6 The Distribution Licensee shall raise bill on the Consumer in accordance with the following equation:

Energy Bill of consumer = Fixed Charges + other applicable charges and levies + $(EDL\ x\ TRST)$ - $(ERE\ *TPPA)$ - Billing Credit;

Where:..."

1.8.2 Comments Received

Majority of the comments and suggestions were received on the issues specified in the above cited Regulations, with most Stakeholders suggesting that Net Metering should be allowed for all consumer categories without any restriction.

Shri Nitin Gadkari, Minister (Ministry of Road Transport and Highways), Government of India in his letter addressed to Hon'ble Union Power Minister has suggested as under:

- a. Net Metering should be optional along with Net Billing till target is achieved or up to 2022.
- b. Since, a few Distribution Licensees are availing the Central Financial Assistance (CFA) Subsidy Scheme, the process for giving subsidy to Eligible Consumer should be made simple in order to encourage Distribution Licensees to avail SHRUSTI scheme.
- c. The Commission should introduce a single window application system since common man finds it difficult to deal with various departments.

d. The Hon'ble Prime Minister during UN Climate Action Summit 2019 had pledged to increase RE capacity in the country to 175 GW by 2022. The proposed Draft Regulations shall be a deterrent in achieving the country's RE target.

Shri Chandrashekhar Bawankule, Ex - Minister Energy and New & Renewable Energy, Government of Maharashtra, submitted that the proposed Regulation will discourage solar installations in the State. He further submitted that the carbon footprint of Maharashtra will increase, and the State will not be able to achieve its Solar Mission target, as people will be discouraged to use solar energy for captive use and electric vehicle acceptance will also be affected. He also added that MSME, the general public industries, institutes and Government Bodies have communicated to the Ministry regarding the negative impact of proposed Regulations. He suggested to the Commission to discard the proposed Regulations and continue the MERC Net Metering Regulations, 2015, till the target of 4.7 GW RE installation is achieved by the State of Maharashtra.

MEDA submitted as under:

- a. The provision of Net Metering has been limited to Residential Consumers based on the argument that RE systems have attained grid parity for high tariff consumers and; hence encouraging provisions are required only for the low tariff Residential Consumers.
- b. Continued regulatory support is required to ensure that the RE capacity addition in the State meets the target set by the Government. It is also unfair to make discrimination among the Consumers on the basis of applicable tariff and it is in violation of Section 62(3) of the Electricity Act, 2003.
- c. The proposed system of Net Billing does not allow Consumers to set off the energy from their own RE system against their consumption, which has to be necessarily sold to the Distribution Licensee. Also, the same is allowed only to limited extent. Cross-subsidy to higher tariff Consumers cannot be a criterion to limit Net Metering. This violates the fundamental right of the Consumer to set up captive power plant, given to it under Section 9 of the Act. The Draft Regulations also impinge upon the salutary objective of Section 86 (1)(e) of EA, 2003. The Consumer will no longer be motivated to install RE systems. Hence, it requested to allow Net Metering to all consumer categories.

Vidarbha Industries Association (VIA) and others suggested that all consumer categories should be able to consume their own generated units as Captive Power Producer (CPP). VIA submitted that solar generation supports peak load requirement of the grid and helps in flattening the load curve. The Forum of Regulators (FOR) has issued a draft Model Regulations in April 2019, where it is never recommended to change the existing Net Metering system to Net Billing system for all consumer categories. Hence, the consumers should have the choice of opting for Net Metering system or Net Billing system. The following submissions has been made:

a. <u>Suggestions for Net Metering System:</u>

- i. The interconnection point should be on the consumer side of meter.
- ii. Net Metering with capacity limit of 1 MW, limited to their Contracted Demand/Sanctioned Load, should be allowed for all consumer categories.
- iii. All categories should be allowed to self-consume up to 100% of power generated from such systems.
- iv. In case consumer wants to utilize banked energy, he will have to pay Rs. 1 per unit banking charge in normal tariff slot. If consumer wants to utilize banked energy in higher tariff slot, then the banking charge should be increased to Rs. 1.5 per unit in evening peak and Rs. 1.25 per unit in morning peak. No banking charge should be charged from consumers for energy utilized in off-peak tariff slot.
- v. Any unutilized energy in the month shall be carried forward to the next month. At the end of settlement period, any unutilized banked energy shall be purchased by Licensee at Generic Tariff.
- vi. There should not be any other taxes or duties imposed on Net Metering system.
- vii. Residential category should be exempted from paying banking charges, transmission and distribution losses and any other taxes or duties on banked energy.
- viii. RPO benefits of generated energy shall be passed on to Licensee and in case consumer is Obligated Entity and desirous of utilizing the RPO obligation, he shall pay Rs. 1 per unit of generated energy to the Licensee.

b. Suggestions for Net Billing System:

- i. In case of Net Billing system, the interconnection point shall be on Licensee side of meter. The installation of solar generating system may within consumer premises or any other premises under his ownership or rented or leased.
- ii. The consumers should be allowed to install solar systems above 1 MW but limited to their Contracted Demand/Sanctioned Load.
- iii. The energy generated by the solar generating systems shall be purchased by the licensee at Generic Tariff determined by the Commission.
- iv. The Commission should ensure that the Generic Tariff is determined in a manner, that the RE generator will recover cost of installation and maintenance cost of generating systems, provide adequate return on investment, and also provide additional incentives to reduce distribution losses. Hence, it is requested to determine Generic Tariff for slab wise capacities, i.e., 0-20 kW, 21-50 kW, 51-100 kW, 100-500 kW, and above 500 kW. The Licensee shall be benefited by RPO achievement, which shall be passed on the consumer of the Licensee.

c. Suggestion for creating category under Net Metering system above 1 MW

- i. Another category can be created for Net Metering consumer who wants to install solar system under Net Metering arrangement within his premises above 1 MW but limited to his Contract Demand. Such facility to be allowed after payment of Net Metering surcharge of Rs.1 per unit to Licensee on total unit generated less unit exported to Licensee every month.
- ii. The Open Access consumers should be allowed to install solar system above 1 MW capacity, after payment of Rs. 1.5 per unit plus wheeling charge and losses. Further, against cross subsidy of Rs. 1.5 per unit, the Open Access consumer will pay Rs. 1 per unit. The benefit of Licensee shall be in RPO obligation. If consumer is Obligated Entity and wants to utilise RPO, he will have to pay Rs. 1.5 per unit instead Rs. 1 per unit.

Tata Motors Ltd. submitted that Net Metering should be allowed for industrial and commercial users without any cap on quantum of set off. A suitable cap on the installation may be introduced in case of grid constraints.

Prayas Energy Group submitted as under:

- (a) FOR Model Regulations has proposed both Net Metering and Net Billing, and not recommended only Net Billing;
- (b) The Commission should allow choice between Net Metering and Net Billing to all categories;
- (c) Net Metering essentially allows energy banking without any restriction at no cost to consumer, who is using the grid as virtual bank;
- (d) Consumer is saving on battery cost and efficiency loss from use of battery;
- (e) There is a cost to energy banking service, since electricity price varies throughout the day and year;
- (f) Distribution Licensee is providing energy banking service as well as reliability to the Net Metering installations, as consumer does not have to match solar generation with his demand profile;
- (g) A balanced Net Metering approach should be adopted, wherein the energy banking service provided by the Distribution Licensee should be valued, and consumers at least partly bear the cost of reliability and future uncertainty;
- (h) Allow Net Metering for all categories, but without Banking Charges and any Additional Fixed Charges for up to 10 kW or 1200 units/month, as FOR has proposed minimum size of 10 kW for Net Billing and MNRE subsidies are available till 10 kW capacity;

- (i) For Net Metering installations above 10 kW, additional Fixed/Demand Charges of Rs. 150/kW/month may be levied, as good part of Fixed Costs are recovered through Variable Charges (eg: Wheeling Charges are meant to recover fixed costs but recovery is entirely variable; similarly, a good part of Energy Charges is intended to recover Fixed Costs)
- (j) For Net Metering installations above 10 kW, Banking Charges linked to applicable TOD charges, i.e., Rs. 1.10 /kWh for time slot 1800-2200 hours, may be levied.

The Maharashtra Solar Manufacturers' Association requested to allow Net Metering to all consumer categories. In extreme case, the Distribution Licensee may charge 10 to 15 paise/kWh for units exported from Net Meter system. Alternatively, out of exported units, some small portion can be utilized by Distribution Licensee without giving credit to the consumer for that portion. For eg., the consumer may be given credit of only 95% from exported units, for netting his consumption in a billing cycle. This will give reasonable revenue to the Distribution Licensee.

MSEDCL submitted that although the Commission has proposed to allow Net Metering only for Residential Consumers with netting off for first 300 units, it would still have impact on the cross-subsidy structure. This approach is not in the line with that adopted in developed countries, where for all consumers, solar rooftop installation is done through feed-in tariff structure only. Further, Rooftop system on Net Metering basis provides discriminated benefit to different consumers, even if they install rooftop system of same capacity and generate same quantum of electricity, resulting in different Return on Equity (RoE) for different consumers. The same also results in loss of cross subsidy, which in turn results into tariff rise for other common consumers. In view of the same, the rooftop system on Net Billing basis may be implemented for Residential Consumers also, as the same provides same RoE for all consumers, irrespective of the tariff slabs in which they fall. The Net Billing arrangement is a level playing field in which both subsidised and subsidising consumers will get the same RoE on installed RE system.

MSEDCL further submitted that in case of Net Billing arrangement, it should be clarified that if the RE generating system is installed on the consumer side of the consumer meter, the internal consumption shall be billed at Retail Supply Tariff of the Distribution Licensee, in order to avoid any confusion on the units to be billed by the Licensee. Also, the Electrical Inspector shall intimate the Licensee about such RE generating systems connected on the consumer side of consumer meter.

Adani Electricity Mumbai Limited (AEML) submitted that the Draft Regulations are progressive in nature, and are intended to balance the interest of all stakeholders and to rationalise the benefits of Rooftop RE generating systems to various tariff categories. AEML

added that this will not only add to the decentralized generation capacity, but it will also help improve the sales mix ratio of Distribution Licensees and may help in minimising the cross-subsidy requirement.

Prabhatkiran Sustainable Energy Private Limited and Others submitted that the consumer should have the choice of opting either for Net Metering or Net Billing, in line with Clause 10 (i) (c) of Draft Model Regulations for Grid Interactive Distributed Renewable Energy Sources, published by FOR in April 2019.

Green Sun Solar and Others submitted that if the Draft Regulations are implemented, the payback period will become longer for Micro, Small & Medium Enterprises (MSME) and there will be no benefit of investing in solar generating system. It will discourage MSME sector to adopt solar. The vision of Government of India to promote MSME will not be sustainable, as contribution of power cost is much higher. Hence, it is requested to continue existing Net Metering arrangement instead of Net Billing arrangement.

Shri Animesh Damani and Others submitted that the change proposed in the Draft Regulations will result in the complete shut-down of the roof-top solar business in the State and will result in massive unemployment. Most industries follow six days a week work schedule, hence, there is a massive drop in the consumption of power during the off day. Under the Net Metering framework, such a consumer could export the excess production to the grid and net-off against his import. This was a key factor in the growth of the roof-top solar segment with Commercial and Industrial consumers as they would not suffer losses during the off-day. Under the proposed Net Billing Arrangement, the viability of setting up roof-top solar project by industry greatly reduces. Over 80% of Industrial and Commercial Consumers will not find solar roof-top installation a viable option. Moreover, out of 22000 plus HT consumers in the State, only 1500 have availed of Net Metering. This clearly shows that there has been limited penetration so far and such a move will discourage further growth. Moreover, in FY 2018-19, the total units exported from Solar Roof-top installations in the State were 15 MU, which is just 0.01% of the total units purchased by MSEDCL.

College of Engineering and Technology, Jalgaon and Others requested the Commission to grant exemption to rural based colleges and schools from the Draft Regulations, who should be allowed to continue as per the MERC Net Metering Regulations, 2015, since, the college is self-financed and payback period will be longer.

The Pune District Citizens Forum Connect Group and Others submitted that the Draft Regulations has limited Net Metering to only the first 300 units of electricity generation per month. The rate of return on investment is significantly lower, making it unviable to invest. Moreover, shifting from Net Metering system to Net Billing system is unfair for solar rooftop Consumers. Such a system is not consumer and environment friendly and discourages new

Consumers from installing rooftop solar. It requested to discard the Net Billing system proposed in Clause 11.4 and Clause 12.5 in Draft Regulations.

Thane Municipal Corporation submitted that Projects that are already planned, approved by the General Body, financial provision approved, tenders already published, work order placed, or system installed should be exempted from the purview of MERC Grid Interactive Rooftop RE Regulations, 2019. While developing RE projects in Solar City and Smart City as per guidelines of Central and State Government, grid support to bank unutilized energy has been considered. Barring one or two RE Projects, all projects have been planned on Build Own Operate and Transfer (BOOT) basis having minimum 15 years contract. Any change in Net Metering Regulations at this stage will destroy the financial viability of all the Projects.

1.8.3 Analysis and Commission's Decision

The prevailing Regulatory framework under the MERC Net Metering Regulations, 2015 facilitated the installation of rooftop RE generating systems to a certain level. However, the present Regulations face limitations in the changed market scenario, because of which penetration of rooftop RE capacity is far lower than Target. The present regulatory framework of Net Metering is focused on self-consumption. These Regulations do not expect the consumer to become a generator by oversizing and generating much more than his consumption requirement and banking these units for future consumption. Also, it cannot be ignored that in the past, higher installation levels of Grid Connected Rooftop System has been mainly by the commercial and industrial consumers. The retail supply tariff is based on the cross-subsidy principle and for commercial and industrial consumers, the tariffs are higher than the cost of energy delivered by RE Generating system. Any consumption offset by such RE generation leads to loss of revenue to the Distribution Licensee thereby disturbing the revenue-expenditure balance. Such revenue loss caused by reduction in sales to subsidizing categories leads to burden on the other consumers for compensating the revenue loss of the Distribution Licensee. This will put additional burden on the consumers not opting for RE generation and they will be compensating the additional/banked generation by way of higher tariffs.

After taking the above into account, the payback period and the changed market scenario for financing such Distributed RE projects, the Commission in the Draft MERC Grid Interactive Rooftop RE Regulations, 2019 had proposed to continue the Net Metering arrangement for Residential category of consumers, with special focus on the small and low-end consumption levels in this category. Also, the Net Billing arrangement was proposed for all other consumer categories for setting up RE Generating System.

The Commission has now finalized these Regulations after due Public consultation process and after taking due cognizance of the various suggestions and comments received from different

Stakeholders. The Commission appreciates the responses received from the Stakeholders and the efforts taken by the Stakeholders to put across their views and concerns.

The Commission would like to clarify that in the draft Regulations, the promotion of Rooftop RE generation is the only intention. There is a need to further facilitate the scaling up of Grid connected rooftop RE Generating systems to the next level, in order to achieve the national target of 40 GW by 2021-22, of which Maharashtra will have to achieve a significant share. Also, after taking cognizance of such ambitious target, the Commission has increased the Solar RPO target in the MERC (Renewable Purchase Obligation, its Compliance and Implementation of Renewable Energy Certificate Framework) Regulations, 2019. The Solar RPO targets have been increased from 3.50% to 13.50% in next five years. The Commission has also specified that Obligated Entities can off-set up to 15% of their Non-Solar RPO by over-achievement against Solar RPO and vice-versa. Further, incentives have been provided for achieving higher RPO targets upto to the targets set by the Government of India. Such high targets of Solar RPO, which unlike roof top solar targets, are required to be mandatorily achieved by the Obligated Entities, which reflects the Commission's commitment to promote RE generation in the State, especially Solar, which would lead to creation of multiple opportunities in business as well as employment.

The Commission is of the view that there has been a perception mismatch, and the implications of the Draft Regulations appear to have been misunderstood. However, perception is also very important, and can play a big role in achieving the ambitious targets set by the Government of India. The Commission accepts that there is a need to not only correct this perception, but also address the genuine concerns of the Stakeholders, by making the necessary modifications to the Clauses related to Net Metering and Net Banking in the MERC Grid Connected Rooftop RE Regulations, 2019.

The FOR, in its Meeting held on November 13, 2018, deliberated the Model Regulations / Report and recommended as follows:

- "After deliberations, the Forum endorsed the Model Regulations and Report subject to the following modifications in the Report and Regulations:
- a. Focus should be on Roof Top installations and their treatment.
- b. Net billing concept will be adopted for the Roof top.
- c. The treatment of Distributed Energy Resources (other than rooftop) should be studied further and presented to the FOR."

Thus, FOR has recommended to adopt the concept of Net Billing system for Rooftop systems for all categories. However, considering the comments and suggestions received from the Stakeholders, the Commission at this stage has decided to allow Net Billing Arrangement as another option, in addition to Net Metering, for promoting rooftop RE Generating Systems.

In view of the above, it is proposed to continue with the existing Net Metering Arrangement for all eligible consumer categories irrespective of the category, upto a limit of 1 MW, without any consumption limit. Also, the option of Net Billing Arrangement shall be available for all consumer categories, to be exercised at the choice of the consumer.

Further, the existing structure of Retail Supply tariff has an in-built cross-subsidy component. The Tariff for cross-subsidizing categories, such as Commercial, Industrial, etc., is higher than the Average Cost of Supply (ACoS) and the Tariff of cross-subsidised categories such as Residential and Agriculture, is lower than ACoS. In short, the higher Tariff for Commercial and Industrial categories cross-subsidises the lower Tariff for Residential and Agriculture category. Any revenue loss due to lower sales billed to Commercial and Industrial consumers setting up Rooftop RE Plants would have to be met through tariff increase to subsidised consumer categories and other subsidising consumers, who do not have the space or capital to invest in Rooftop RE plants.

Further, the generation from distributed RE sources such as wind and solar is non-firm. Because of uncertainty of generation from these sources, the power procurement plan of the Distribution Licensee is required to be dynamic and is likely to be adversely affected. Also, Rooftop RE sources are grid connected and operating in integration with the distribution grid. The balancing of the grid is required to be done at distribution system level, considering non-firm RE generation. The responsibility of grid management and the Deviation Settlement Mechanism lies with the Distribution Licensees, and the rooftop RE systems do not have such responsibility. Also, the supply of Distribution Licensee works as standby arrangement for such grid-connected systems, which will always be available in case of failure of generation from these sources.

Further, generation from RE sources is exported to the distribution grid during periods of lower self-consumption and could be taken back from distribution grid during peak period/higher consumption period. Thus, the distribution grid is being used for free as a bank/battery to store the energy generated, which is taken back for consumption. The consumer also saves on the requirement and capital cost of battery systems and their related inefficiency, which would have to be installed, in case the banking facility was not provided by the Distribution Licensee. The consumer does not have to match his generation capacity to his consumption pattern and has the luxury of generating and injecting into the grid, with the facility to utilise such energy at no cost at any time during the financial year.

Also, export of generation into distribution grid during light loaded conditions would lead to increase in voltage of distribution system at local level. The voltage levels are required to be maintained by the Distribution Licensee at specified level as per applicable Regulations. Thus,

higher penetration of Net Metering installations affects the technical operations of the distribution grid.

Under the Net Metering Arrangement, there is saving to consumer equal to applicable energy charges for every unit generated from the rooftop RE System. The saving increases with the increase in applicable tariff, i.e., the level of cross-subsidy. In other words, the Return on Investment in rooftop RE systems is artificially higher because of the cross-subsidy element present in the tariff for the respective category. The Commission has been reducing the cross-subsidy over the years, and will be continuing in its efforts to do so over the future tariff determination exercises. Therefore, the Return on Investment will reduce as the tariff reduces.

On the other side, there is revenue loss equal to applicable tariff for every unit generated from the rooftop RE System. Further, the Aggregate Revenue Requirement (ARR) of the Wires Business of the Distribution Licensee is entirely fixed cost in nature. However, the recovery of Wheeling Charges in the State of Maharashtra is entirely variable in nature, as the Wheeling Charges are recovered in Rs/kWh terms. As the quantum of energy billed to the consumers is reduced under the Net Metering Arrangement, the Wheeling Charges will also be underrecovered to that extent. Similarly, a major part of the fixed cost of the Distribution Licensee is recovered through energy charges levied by the Distribution Licensee. In case of MSEDCL, the Fixed Charges are designed to recover only one-third of the Fixed Costs of MSEDCL. Hence, any reduction in units billed due to Net Metering, would lead to lower revenue from energy charges, further leading to increased under-recovery of fixed costs of the Distribution Licensee.

At the same time, Net Metering is not entirely disadvantageous to the Distribution Licensee. The Distribution Licensee is able to meet its RPO targets on account of the units deemed to have been purchased from RE sources, for all units adjusted against the consumers' bills due to Net Metering. Further, reduction of every unit of sale leads to lower power purchase requirement to that extent, which will result in corresponding savings in variable cost of power purchase. It has to also be noted that this saving in power purchase quantum is at consumption end, thereby leading to increased saving in power purchase quantum at the Generator busbar, after factoring in the Transmission Losses and Distribution Losses. Further, due to the very nature of distributed generation located at consumption end, the Distribution Losses would also reduce, though it could be difficult to quantify the exact benefits in this regard.

From the above, it can be seen that the role of the Distribution Licensee is crucial in facilitating the operation of the Net Metering Arrangement. Hence, it is required to balance the interest of both consumers as well as the Distribution Licensee.

The Commission notes that some Stakeholders have suggested and supported the introduction of additional charges for RE systems under the Net Metering Arrangement, to offset part of the revenue loss to the Distribution Licensee.

Hence, the Commission has decided to introduce *Grid Support Charges* under the Net Metering Arrangement. It is proposed that these *Grid Support Charges* shall be levied on the quantum of gross generation from RE sources during the billing period. These *Grid Support Charges* are pricing signals and will help to partly recover the cost of network, banking facility, standby arrangement, and distribution grid balancing provided by the Distribution Licensee and mitigation of risks associated with operating of Net Metering Arrangement after adjusting RPO benefits, avoided distribution losses and any other benefits accruing to the Distribution Licensee. However, at present, the Commission has decided to exempt majority of the consumer base (number of consumers) of all the categories from these Grid Support Charges.

The Commission shall determine consumer category wise *Grid Support Charges* under Section 62 of the Act through the public consultation process. The Distribution Licensee shall propose *Grid Support Charges* in their respective Multi Year Tariff /Mid Term Review Petition. The Commission shall determine the consumer category wise *Grid Support Charges* in the respective Tariff Order, after following the due public consultation process.

Further, it is noted that Government of India has increased the focus on Residential category and announced Central Financial Assistance (CFA) to the Residential category and has stated that CFA will not be available for other categories, i.e., institutional, educational, social, government, commercial and industrial sectors as the beneficiaries in these sectors are high tariff paying consumers. Also, additional incentives are provided to Distribution Licensees for achieving the capacity targets for residential category up to 10 kW load. Distribution Licensees can mitigate part of the cost of above-mentioned facilities provided under Net Metering Arrangement to Residential category under this scheme.

Hence, with the intention of encouraging and promoting Rooftop RE installations under Net metering arrangement by low load consumers, it is proposed not to levy *Grid Support Charges* to consumers having load up to 10 kW.

It is also noted that the Distribution Licensee is revenue neutral. Any under-recovery of approved revenue will be recovered in future years through revision in retail supply tariff. The revenue loss on account of implementation of Net Metering arrangement will be socialized through ARR gap and will be levied on other consumers. Levy of such Grid Support Charges will not add benefit to Licensee; however, it will reduce the future burden on other consumers on account of implementation of Net Metering Arrangement.

However, for consumers opting for Net Metering Arrangement, levy of Grid Support Charges would not significantly affect their savings/payback period.

The Net Billing Arrangement has been given as an option to the consumer. In order to make Net Billing Arrangement more equitable with Net Metering Arrangement, the Commission decides to consider the rate of purchase of energy by Distribution Licensee equal to Average Power Purchase Cost (APPC) approved by the Commission in Tariff Order of Distribution Licensee for respective year.

Accordingly, Regulation 4 has been modified as under:

"4.2 The Eligible Consumer of all categories may set up the Renewable Energy Generating System under the Net Metering Arrangement or Net Billing Arrangement."

Accordingly, Regulation 11 has been modified as under:

"11 Net Metering - Energy Accounting and Settlement

...

- 11.4 The energy generated by the Renewable Energy Generating Station shall be offset against the energy consumption of the consumer from the Distribution Licensee in the following manner:
- a) If the quantum of electricity exported exceeds the quantum imported during the Billing Period, the excess quantum shall be carried forward to the next Billing Period as credited Units of electricity;
- b) If the quantum of electricity Units imported by the Eligible Consumer during any Billing Period exceeds the quantum exported, the Distribution Licensee shall raise its invoice for the net electricity consumption after adjusting the credited Units;
- c) The unadjusted net credited Units of electricity as at the end of each financial year shall be purchased by the Distribution Licensee at the Generic Tariff approved by the Commission for that year, within the first month of the following year:
 - Provided that, at the beginning of each Settlement Period, the cumulative quantum of injected electricity carried forward will be re-set to zero;
- d) In case the Eligible Consumer is within the ambit of Time of Day (ToD) tariff, the electricity consumption in any time block, i.e. peak hours, off-peak hours, etc., shall be first compensated with the quantum of electricity injected in the same time block; any

- excess injection over and above the consumption in any other time block in a Billing Cycle shall be accounted as if the excess injection had occurred during off-peak hours;
- e) The Distribution Licensee shall compute the amount payable to the Eligible Consumer for the excess Renewable Energy purchased by it as specified in Regulation 11.4 (c), and shall provide credit equivalent to the amount payable in the immediately succeeding Billing Cycle.
- 11.5 The Commission may determine in the retail Tariff Order such Grid Support Charges to be levied on the generated energy under Net Metering systems which shall cover balancing, banking and wheeling cost after adjusting RPO benefits, avoided distribution losses and any other benefits accruing to the Distribution Licensee. These Grid Support Charges would be determined consumer tariff category wise, based on the proposal of the Distribution Licensee in its retail supply Tariff Petition, supported by adequate justification:

Provided that the consumers of all Categories having Sanctioned Load up to 10 kW shall be exempted from payment of Grid Support Charges for Net Metering systems:

Accordingly, Regulation 12 has been modified as under:

"12.5 The Distribution Licensee shall enter into Power Purchase Agreement at the APPC approved for the respective period by the Commission:

Provided that the APPC stipulated in the Power Purchase Agreement shall be constant for the entire duration of the Agreement."

1.9 Regulation 5: Capacity limits at Distribution Transformer level

1.9.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

- "5.1 The Distribution Licensee shall allow Net Metering Arrangement or Net Billing Arrangement, as the case may be, to Eligible Consumers as specified in these Regulations.
- 5.2 The cumulative capacity of all Renewable Energy Generating Systems under Net Metering Arrangements and/or Net Billing Arrangements connected to a particular Distribution Transformer/feeder of the Licensee shall be allowed up to 40% of its rated capacity:

Provided that the Distribution Licensee shall allow Net Metering and/or Net Billing connectivity exceeding 40% of such rated capacity, unless any adverse impact has been assessed based on a detailed load study carried out by it.

5.3 The Distribution Licensee shall update the Distribution Transformer-wise capacity available and the cumulative capacity of the Renewable Energy Generating Systems installed under Net Metering arrangements quarterly, and provide the information on its website in the month following the close of the relevant quarter in the format specified in Annexure 6."

1.9.2 Comments Received

Amp Solar and Others requested to enhance capacity limits at Distribution Transformer level upto 80% like other States, viz., Karnataka, Odisha, Kerala, etc.

Some stakeholders requested that the cumulative capacity on rooftop solar system at a particular Distribution Transformer should be allowed up to 100% of the particular DT capacity as per Government of India (GoI) recommendation dated January 13, 2017. Further, Solar is daytime energy source with low Capacity Utilisation Factor (CUF) and will not overload the transformer, if solar plant is allowed up to 80% to 100% of DT capacity.

AEML submitted that the present limit of 40% of Distribution Transformer capacity may be continued and the detailed technical study may be undertaken in future to review the same. AEML added that if no capacity limit is specified, then it may create operational issues and supply quality issues on account of reverse flow and meshed network at Distribution level.

Sun Source and Others submitted that the GIZ study, based on data provided by Licensees in Madhya Pradesh, Delhi, etc., concluded that PV penetration level *up to 75% of DT capacity and higher* can be implemented without undertaking any measures to contain voltage problems or overloading.

Prayas Energy Group suggested that it would be better if the Distribution Licensee not only provides such information on a quarterly basis but also publishes the information such as details of circle/feeder-wise rooftop generation capacity, Circle-wise quantum of excess generation and payments made, number and capacity of Behind the Meter RE systems, which are not availing Net Metering/Net Billing, Average time taken for processing an application in each circle, Number of DTs where the capacity threshold has been met, etc. This information can be used further for planning purposes.

1.9.3 Analysis and Commission's Decision

In the MERC Net Metering RE Regulations, 2015, the ceiling load of Distribution Transformers on account of Net Metering was specified as 40%. In the Draft Regulations, the minimum loading was allowed as 40% of Distribution Transformer Capacity, with the Distribution Licensee required to allow loading higher than 40% of such rated capacity, unless any adverse impact has been assessed.

Now, based on the suggestions and objections received from Stakeholders, and based on the approach adopted by FOR and other SERCs in this regard, the Commission decides to increase the capacity limit up to 70% of rated capacity of Distribution Transformer from the present level of 40%. Further, it is clarified that this limit shall not be applicable to grid connected RE generating system connected behind the consumer's meter. As regards the suggestions regarding creation and maintenance of web-based data base, the Commission is of the view that the web-enabled application process is already enabled. While the Distribution Licensee is required to maintain the necessary database at its end, further detailing of the kind of database to be maintained by the Distribution Licensee and making it public, may not be appropriate. Further, details related to transformer wise capacity and cumulative RE generating system connected to such transformer, which is important for prospective Net Metering / Net Billing consumer, is to be published on Distribution Licensee's website on quarterly basis in format prescribed under Annexure 6 to the Regulations.

Accordingly, Regulation 5.2 is modified as under:

"5.2 The cumulative capacity of all Renewable Energy Generating Systems under Net Metering Arrangements and/or Net Billing Arrangements connected to a particular Distribution Transformer/feeder of the Licensee shall not exceed 70% of its rated capacity:

Provided that the Distribution Licensee may allow Net Metering and/or Net Billing connectivity exceeding 70% of such rated capacity, upon consideration of a detailed load study carried out by it."

1.10 Regulation 6.2: Capacity of Renewable Energy Generating Systems

1.10.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"6.2 The capacity of the Renewable Energy Generating System to be connected at the Eligible Consumer's premises shall not exceed the Sanctioned load (in kW) or the Contract Demand (in kVA) of the Consumer, as applicable."

1.10.2 Comments Received

Think Energy suggested that the Consumers should be allowed to install Rooftop Projects at a ratio higher than Contract Demand by taking a higher DC capacity. The maximum DC:AC ratio to be allowed shall be 1.3. The inverter capacity shall however, be a maximum of Contract Demand/Sanctioned Load.

MSEDCL submitted that RE Generating capacity should be limited to 50% of the Sanctioned Load/Contract Demand of the consumer, instead of Net Billing Arrangement with no limit. This

will ensure that power generated under this Regulations will be consumed within the same premises only and not injected into the grid at LT or HT level, which will otherwise result into Wheeling Losses of 12% or 9%, respectively. The limit of 50% has been introduced by Gujarat.

1.10.3 Analysis and Commission's Decision

The Sanctioned load or the Contract Demand of the consumer is an arrangement of the consumer already agreed with the Distribution Licensee as per Supply Code Regulations. The Sanctioned load or the Contract Demand shall be considered as the base for limiting capacity of RE generation system at individual level, irrespective of technology used.

The Commission notes that the Rooftop RE system, especially Solar Rooftop PV has CUF of around 17%. Hence, even though installed capacity of such systems is equal to Sanctioned Load/Contract Demand of the consumer, the output generation will be at such lower CUF. This ensures that the power generated is generally consumed within the same premises. However, the injection of generation during low consumption or zero consumption period is inevitable.

The Commission decides to retain the existing Regulation.

1.11 Regulation 6.3: Maximum Renewable Energy Generating System capacity and DT rating

1.11.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"6.3 The maximum Renewable Energy Generating System capacity to be installed at an Eligible Consumer's premises shall be subject to the cumulative capacity of the relevant Distribution Transformer, which has already been utilized, as specified in Regulation 5.2:

Provided that a variation in the rated capacity of the System within a range of five percent shall be allowed...."

1.11.2 Comments Received

Some stakeholders suggested to add a proviso to allow Consumers to install Grid connected RE generating systems, if the Consumers are willing to pay for the cost of new or upgradation of DT capacity, in case the existing transformer is already loaded up to its maximum capacity.

1.11.3 Analysis and Commission's Decision

The in-principle approval of new Distribution Transformer or upgradation of existing loaded Distribution Transformer is accorded by the Commission through a separate process as per Capex Approval guidelines. This in-principle approval includes technical feasibility as well as prudence of cost. Hence, the Distribution Licensee, at its discretion, and if necessary, may approach the Commission for in-principle approval for installation of such new or upgradation

of existing Distribution Transformer, with adequate technical details and financing from consumer contribution, subject to the Guidelines for Capex approval. In view of this, the Commission decides to retain the Clause as proposed in the Draft Regulations.

1.12 Regulation 6.4: Net Meter on the HT side of the Consumer's Transformer

1.12.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"6.4. HT (11 kV and above) Consumers may install and connect Renewable Energy Generating System at their LT Bus Bar System:

Provided that, in such cases, the Net Meter shall be installed on the HT side of the Consumer's Transformer...."

1.12.2 Comments Received

Some stakeholders submitted that Group Housing Societies are connected to HT system. In case Solar PV system is to be installed in their premises connecting it to HT side, huge cost needs to be incurred. As energy utilization is on LT side, there would be maximum utilization and lower losses. Hence, if Solar PV system is installed on LT side, Net Meter should be installed on LT side of the consumer Transformer.

1.12.3 Analysis and Commission's Decision

This issue has already been dealt with, while addressing the comments on definition of Interconnection Point. Hence, the Commission has not modified this Clause.

1.13 Regulation 6.5: Enhancement or upgradation of RE Generating Systems

1.13.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"6.5 An Eligible Consumer may install or enhance the capacity of, or upgrade the Renewable Energy Generating Systems at different locations within the same premises:

Provided that the total capacity of such Systems within the same premises shall not exceed the capacity limits specified in Regulations 6.1, 6.2 and 6.3....."

1.13.2 Comments Received

MEDA and Others requested to allow Rooftop Solar installation up to 100% of Consumer's annual on-site energy consumption with the Distribution Licensee.

1.13.3 Analysis and Commission's Decision

As stated earlier, the Sanctioned load or the Contract Demand of consumer is an arrangement of the consumer already agreed with Distribution Licensee as per Supply Code Regulations. Hence, the Commission decides to retain the Clauses proposed in the Draft Regulations, except to delete the reference to Clause 6.1 which specifies the minimum size.

1.14 Regulations 7.1 to 7.9: Inter-connection with the Distribution Network / Grid, Standards and Safety

1.14.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"7.2. The Eligible Consumer may install a Renewable Energy Generating System with or without battery back-up:

Provided that, if an Eligible Consumer opts for connectivity with a battery back-up, the inverter shall have appropriate arrangement to prevent the battery/decentralized generation (DG) power from flowing into the grid in the absence of grid supply, and that an automatic as well as manual isolation switch shall also be provided.

7.3 The Eligible Consumer shall be responsible for the safe operation, maintenance and rectification of any defect in the Renewable Energy Generating System up to the point of Net Meter or Renewable Energy Generation Meter, beyond which point such responsibility, including in respect of the Net Meter, shall be that of the Distribution Licensee:

Provided further that the Renewable Energy Generation Meter shall be maintained by the Distribution Licensee....

7.5 The Renewable Energy Generating System must have anti-islanding protection to prevent any feeding into the grid in case of failure of supply or grid:

Provided that applicable IEC/IEEE Technical Standards shall be followed to test islanding prevention measure for grid connected inverters.

7.6 The Eligible Consumer may use his Renewable Energy Generating System in islanding mode for his own consumption."

1.14.2 Comments Received

Some stakeholders submitted that surplus sale of power to Distribution Licensee shall be an unviable proposition for the generator. In order to prevent such loss, consumers will have to store energy by setting up internal battery storage solution with proper isolation switching to prevent power flow to the grid by such Distributed Generated setup. Hence, it is requested to

remove the words "inverter shall have appropriate arrangement to prevent the battery/decentralized generation (DG) power from flowing into the grid in the absence of grid supply, and that an automatic as well as manual isolation switch shall also be provided".

MSEDCL submitted that the Eligible Consumer should be responsible for the operation, maintenance and rectification of any defect in the RE Generating System including Net Meter. Hence, in case of defect in Net Meter or RE Generation Meter, it shall be procured/maintained by the Eligible Consumer and shall be tested and installed by Distribution Licensee.

MSEDCL also sought confirmation on Regulation 7.5 regarding whether it should be islanding protection or anti-islanding protection.

1.14.3 Analysis and Commission's Decision

Regulation 7.2 specifies the safety of operation of Grid connected RE Generation Systems during islanding mode. In case of RE Generating System with battery back-up, if appropriate arrangement is not provided, the reverse power can flow to dead electricity network, which might have been kept unoperated due to planned outage. This may lead to fatal/non-fatal incidents. It is required to ensure safe operation of grid connected RE Generating systems in order to prevent the battery/decentralized generation (DG) power from flowing into the grid in the absence of grid supply. Hence, the Commission decides to retain the existing Regulation, except for replacing the terms 'battery back-up' and 'battery/decentralized generation (DG)', with the more generic term 'storage'.

The Commission clarifies that in case of defect in Net Meter or RE Generation Meter, it shall be procured/replaced by Consumer. However, such meters shall be tested, installed and maintained by the Distribution Licensee.

Regarding Clause 7.5, the Commission clarifies that RE Generating System must have appropriate protection for islanding the RE generating system from the distribution network to prevent any feeding into the grid in case of failure of supply or grid. The appropriate modification has been made to Clause 7.5 as under, and Clause 7.6 has been deleted.

"7.5 The Renewable Energy Generating System must have appropriate protection for islanding the RE generating system from the network of the Distribution Licensee to prevent any feeding into the grid in case of failure of supply or grid:

Provided that applicable IEC/IEEE Technical Standards shall be followed to test islanding prevention measure for grid connected inverters".

1.15 Regulations 7.10 and 7.11: RE Generating Systems connected behind the Consumer's meter

1.15.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"7.10 Renewable Energy Generating Systems connected behind the Consumer's meter shall be allowed only after prior intimation to the respective Distribution Licensee:

Provided that the Consumer shall be responsible for ensuring that all necessary safeguarding measures as specified by Central Electricity Authority (CEA) are taken:

Provided further that the Commission may determine additional Fixed Charges or Demand Charges and any other Charges for such systems, in the retail Tariff Order, if Distribution Licensee proposes such additional Fixed Charges or Demand Charges and any other Charges for such systems, in its retail supply Tariff Petition, supported by adequate justification:

Provided also that in case the Consumer installs Renewable Energy Generating Systems behind the Consumer's meter without prior intimation to the respective Distribution Licensee, then the total additional liabilities in terms of additional Fixed Charges or Demand Charges and any other Charges for such systems, shall be levied at twice at the determined rate for such period of default."

1.15.2 Comments Received

MEDA and Others submitted that type of RE systems, which are being dealt with under Regulations, are meant primarily for the captive consumption by the Consumer. As per the Act, provision for Additional charges on Consumers availing power from sources other than Distribution Licensee are allowed only under Section 42(2) of the Act for Open Access consumers. The exemption from additional Fixed Charges or Demand Charges and any other Charges for RE Generating systems should be considered under Section 9 (2) of the Act.

MSEDCL submitted that in case the RE Generating system is installed and synchronised without the permission of the Distribution Licensee, provision for disconnection for such RE Generating system shall be incorporated. Also, additional Fixed Charges or Demand Charges or any other charges, as determined by the Commission, shall also be applicable to those systems which have been installed without giving intimation to the Licensee prior to the finalisation of Regulations, retrospectively.

TPC submitted that similar provisions regarding unauthorised use of electricity are available under Section 126 of Electricity Act, 2003, which should be incorporated in the Clause.

Tata Power Solar Systems Limited suggested to modify the Regulation as "In case of Renewable Energy Generating Systems connected behind the Consumer's meters, it is only

required to inform Distribution Licensee for the same. No approval is required from licensee as this installation will be under captive mode and will not be connected to the grid."

Prayas Energy Group supported the move to recognise installation behind Consumer's meter as there is a possibility of various captive generating systems presently connected to the grid behind the Consumer's meter, which the Distribution Licensee may not be aware of. It is suggested that each RE generating system should be given a unique ID by Distribution Licensee and that a database with relevant details of each Project should be available in the public domain without personal details of the Consumer.

Prayas suggested as under, regarding the proposed levy of Additional Fixed/Demand Charges:

- (a) The additional charge should also be levied on conventional generators (e.g. diesel-based systems) and stand-by generators, operating in synchronized or off-grid mode, but connected behind the meter, in the future.
- (b) There is a need for a sunset clause or a mechanism to phase out the proposed additional charges in a time-bound manner.
- (c) It is to be clarified that the additional fixed charge is applicable to all RE generation systems over and above the additional demand for HT consumers having captive generation.
- (d) Stand-by Charges will be levied on such consumers on the Stand-by component, only if the Consumer's demand exceeds the Contract Demand.
- (e) This additional Demand Charge will not be applicable if there is no Stand-by demand and the Captive Unit is synchronised with the Grid only for the export of power.
- (f) Demand Charge shall be applicable at 25% of the above rates on the start-up demand contracted by the Power Plant with the Distribution Licensee.
- (g) Demand Charge shall be applicable at 75% of the above rates for Steel Plant operating with electric arc furnaces.

Tata Motors Ltd. and Others submitted that as per prevailing practice, Solar PV project developers and consumers disclose all relevant details of Solar PV installation to the Electricity Inspector and other competent authority before commissioning the solar projects. Further, any installation once undertaken after approval of CEA behind consumer's meter does not need any permission from the Distribution Licensee. The levying of additional charges on such systems seems unwarranted. Hence, it is requested to discard the proposed demand charges and other charges specified in Regulation 7.10.

Skeiron Projects and Others submitted that the proposed levy of additional fixed charge on Renewable Energy Generating Systems connected behind the Consumer's meter should be determined only after Public Hearing, so that Developers and Eligible Consumers get a chance to offer their response on the justification provided by MSEDCL in Tariff Petition.

1.15.3 Analysis and Commission's Decision

As elaborated in the Explanatory Memorandum, the proposed Additional Fixed/Demand Charges are intended to compensate the Distribution Licensee, which may incur certain additional expenses on account of such systems, and because such systems, though connected behind the Consumer's meter, do benefit from being connected to the network of the Distribution Licensee. Further, installation of such facility may reduce the utilisation of Distribution Network and thereby such consumer may pay lower charges for such network setup earlier for it. Such unrecovered part of expenses is then loaded on other consumers of the Distribution Licensee. Hence, an enabling provision has been introduced for levy of additional Fixed Charges or Demand Charges and any other Charges for such systems, provided that the Distribution Licensee shall propose such additional Fixed Charges or Demand Charges and any other Charges for such systems, in its retail supply Tariff Petition, supported by adequate justification. Thus, levy of such Charges shall be implemented only after due public process of inviting comments on the Distribution Licensee's proposal. Further, such charges shall not be applied retrospectively to such behind the meter installations installed before the coming into force of these Regulations, in accordance with the philosophy that these Regulations are applicable to prospective installations only.

The Regulations also clearly specify that such behind the meter RE installations requires prior intimation to the Distribution Licensee, and not approval/consent, hence, the fears of the stakeholders in this context are unwarranted.

As regards the suggestion that the provisions regarding unauthorised use of electricity available under Section 126 of Electricity Act, 2003, should be incorporated in the Clause, it is clarified that the parallel drawn is inappropriate. The present Clause refers to installations behind the consumer's meter without intimation to the Distribution Licensee, which is not same as unauthorised use of electricity drawn from the Distribution Licensee.

As regards the detailed suggestions on the framework for the Additional Charges, the same may be made at the appropriate time, when the Distribution Licensee submits its proposal in this regard, as the Regulations only provide an enabling clause and do not prescribe any specific method of levying such Additional Fixed/Demand Charges.

It is clarified that this Clause is intended for Grid Connected RE Generating Systems connected behind the Consumer's meter, and not opting for either Net Metering Arrangement or Net Billing Arrangement, and the necessary clarification has been incorporated in Clause 7.9 of the MERC Grid Interactive Rooftop RE Regulations, 2019. Further, the Commission also clarifies

that the proposed Additional Charges shall not be applicable for Non-Fossil Fuel fuel-based Cogeneration Plants.

Hence, the Clause has been modified as under:

"7.9 Grid Connected Renewable Energy Generating Systems connected behind the Consumer's meter, and not opting for either Net Metering Arrangement or Net Billing Arrangement, shall be allowed only after prior intimation to the respective Distribution Licensee:

Provided that the Consumer shall be responsible for ensuring that all necessary safeguarding measures as specified by Central Electricity Authority (CEA) are taken:

Provided further that the Commission may determine additional Fixed Charges or Demand Charges and any other Charges for such Grid Connected systems excluding Non-fossil fuel-based Cogeneration Plants, in the retail Tariff Order, if the Distribution Licensee proposes such additional Fixed Charges or Demand Charges and any other Charges for such systems, in its retail supply Tariff Petition, supported by adequate justification:..."

1.16 Regulations 8.2, 8.4, 8.5, 8.6 and 8.7: Replacement of Meter and Meter Cost

1.16.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

- "...8.2 All meters shall have Advanced Metering Infrastructure (AMI) facility with RS 485 (or higher) communication port...
- 8.4 Existing Meter in the premises of the Eligible Consumer shall be replaced by the Net Meter at the cost of the Consumer, in accordance with the provisions of the Electricity Supply Code.
- 8.5 If the Eligible Consumer is within the ambit of Time-of-Day ('ToD') Tariff, the Net Meter installed shall be capable of recording ToD consumption and generation.
- 8.6 The Distribution Licensee shall be responsible for the testing, installation, and maintenance of the metering equipment, and its adherence to the applicable standards and specifications.
- 8.7 The Eligible Consumer shall procure, at his own cost, a Renewable Energy Generation Meter conforming to the applicable CEA Regulations at an appropriate location to measure the energy generated from the Renewable Energy Generating System..."

1.16.2 Comments Received

MSEDCL submitted that the responsibility to maintain the AMI Meter including Modem shall be with Eligible Consumer and condition for maintaining it for 5 years shall be obtained from the vendor.

Prayas Energy Group and TPC suggested that the meter would be used for billing or for RPO accounting for Distribution Licensee as well. Hence, as per the current practice, cost of Net Meter and RE Generation Meter should be borne by the Distribution Licensee.

Prabhatkiran Sustainable Energy Private Limited and Others submitted that it is the duty of Licensees to supply meters. The prevailing Regulations mandated meter procurement by Licensee. Clause 8.6 of Draft Regulations lays the responsibility of meter testing on Licensees. However, it is not clear as to who will bear the meter testing charges.

Shri Vasant Patil and Others requested to specify the class of meter for Net Metering Arrangements/ TOD tariff.

1.16.3 Analysis and Commission's Decision

The Commission has already elaborated its rationale for proposing that the consumer has to bear the cost of Net Meter and RE Generation Meter, in the Explanatory Memorandum published along with the draft Regulations. The relevant extract of the Explanatory Memorandum is reproduced below:

"Further, the existing MERC (Net Metering for Roof-top Solar Photo Voltaic Systems) Regulations, 2015 specifies that the Net Meter and RE generation meter shall be installed at the cost of the Distribution Licensee. Most SERCs have specified that the cost of the Net Meter and RE generation meter shall be recovered from the Consumer. The Commission is of the view that the Distribution Licensee has incurred the expenses for the original consumer meter, and if the consumer wishes to replace the same with Net Meter, the cost of the Net Meter should be recovered from the consumer. As regards the RE generation meter, the Commission is of the view that the same is part of the generation facility and has to be borne by the consumer, irrespective of whether the benefit of RPO is available to the Distribution Licensee or not."

Hence, no change has been made to the Regulations in this regard. Further, it is clarified that the cost of Meter Testing shall be borne by the Consumer, in accordance with the Supply Code notified by the Commission. Also, the responsibility of ensuring maintenance of the Metering equipment shall rest with the Distribution Licensee and cannot be passed on to the Consumer.

Regarding the accuracy class of meter, the Commission clarifies that all meters installed at the Renewable Energy Generating System shall comply with the CEA (Installation and Operation of Meters) Regulations, 2006 and subsequent amendments thereof.

1.17 Regulations 9.1 and 9.4: Registration Fees and Communication

1.17.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"9.1 The Eligible Consumer shall apply to the concerned Distribution Licensee for connectivity of the Renewable Energy Generating System with the Licensee's Network along with a registration fee as follows and the Distribution Licensee shall acknowledge receipt of such application:

Particular	Registration Fee
Low Tension Consumer	Rs. 500 for consumer having Sanctioned Load or Contract Demand
	upto 10 kW and Rs 100 thereafter for every 1 kW or part thereof
High Tension Consumer	Rs 10,000/-

Provided that the Commission may stipulate such other amount through Schedule of Charges of Distribution Licensee from time to time;"

"9.4 All correspondence by the Distribution Licensee with the Consumer shall be through email and mobile only."

1.17.2 Comments Received

Several stakeholders submitted that the proposed revision of Registration Fees was very high and would discourage Rooftop PV installations. They requested the Commission to reduce the Registration Fees.

Shri R K Nehra and Others submitted that the Registration Fees specified in Regulation 9.1 of the Draft Regulations should not be revised further. Hence, the proviso "Provided that the Commission may stipulate such other amount through Schedule of Charges of Distribution Licensee from time to time" should be deleted.

It is further submitted that communication amongst various Distribution Licensee offices, involved in permission process, need to be through email only. The use of physical paper, signing and stamp, running behind each staff and officers of licensee need to be curtailed.

TPC requested that the Eligible Consumer should seek approval from Distribution Licensee for installation of RE generating system before the consumer's meter also.

1.17.3 Analysis and Commission's Decision

The Regulations already specify that only web-based processing system shall be adopted for the Applications, hence, no change is required in these Clauses.

The Commission is of the view that there is no need to incorporate the requirement of seeking Distribution Licensee's approval for installation of RE generating system before the consumer's meter, as the application for connectivity addresses this requirement also.

As regards the request to reduce the Registration Fees, the Commission has considered the request and decided to reduce the Fees significantly. Accordingly, the Clause has been modified as under:

"9.1 The Eligible Consumer shall apply to the concerned Distribution Licensee for connectivity of the Renewable Energy Generating System with the Licensee's Network along with a registration fee as follows and the Distribution Licensee shall acknowledge receipt of such application:

Particulars	Registration Fee
Low Tension Consumer	Rs. 500 for consumer having Sanctioned Load or Contract Demand upto 20 kW and Rs 100 thereafter for every 20 kW or part thereof
High Tension Consumer	Rs 5,000/-

Provided that the Commission may stipulate such other amount through Schedule of Charges of the Distribution Licensee from time to time."

1.18 Regulation 10.5: Connection Agreement

1.18.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"10.5 The Connection Agreement shall remain in force for twenty years:..."

1.18.2 Comments Received

TPC and Tata Power Solar Systems Limited requested to increase the Connection Agreement period from 20 years to 25 years, as Useful Life of solar is 25 years. Most States have also incorporated same approach.

Sun Source and Others requested the Commission to allow Consumers to operate after end of contract period with Distribution Licensee, if Useful Life remains. Otherwise it will lead to more stranded capacity.

MSEDCL submitted that the Connection Agreement shall be as per MERC RE Regulations, i.e., up to recovery of cost of installation of the RE generating system. The termination of agreement by Eligible Consumer by giving 90 days' notice may affect RPO planning of Licensee. Hence, the period of notice shall be reviewed and shall be at least one year in advance. If there is no generation for considerable period, it disturbs the RPO planning of the Distribution Licensee, and the provision of penalty for such Eligible Consumers in such case should be incorporated.

1.18.3 Analysis and Commission's Decision

The Commission is of the view that the period of 20 years is appropriate, and has been retained from the MERC Net Metering Regulations, 2015. As regards the suggestion that the notice period by consumer should be one year, and provisions for penalty for such Consumers, the Commission is of the view that the 3 months' notice period is adequate. Further, the loss of RE generation for such consumer will already cause significant loss to the consumer, and there is no need to levy further penalty, as the consumer will always try and ensure maximum generation.

Hence, no change has been made to this Clause.

1.19 Regulation 11.6: In case consumer leaves the system or changes the Supply Licensee

1.19.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"11.6 In case the Eligible Consumer leaves the system or changes the Supply Licensee, the excess electricity shall be considered as inadvertent injection and shall not be paid for by the Distribution Licensee.

11.7 The Renewable Energy Generating System installed under these Regulations shall be exempted from levy of wheeling charges, Banking Charges, cross-subsidy surcharge, transmission charges and surcharges."

1.19.2 Comments Received

Tata Motors and Others submitted that Clause 11.6 specifies that the Eligible Consumer shall not be paid for excess energy fed into the grid in case Consumer leaves the system or changes the Supply licensee. Such provision will be setback for the Consumer who has injected power in to the grid of the Distribution Licensee and will act as obstruction in consumer's choice for selecting its Distribution Licensee. Therefore, the consumer under 'Net Metering Arrangement' should be entitled to receive payments for the power injected in to the Licensee's grid.

MSEDCL submitted that in case the Eligible Consumer leaves the system, Net Metering shall be stopped and the system shall be disconnected. MSEDCL further submitted that sales under

Net Metering are not reflected in the total sales thereby resulting in higher Wheeling Charges. Hence, the consumers not availing Net Metering are paying such increased Wheeling Charges. Also, the load of the consumers availing Net Metering is automatically considered while planning and creating the distribution infrastructure. The Distribution Licensee is required to wheel the energy for compensating the units banked by Net Metering consumers. As such banking mechanism involves wheeling of power, therefore, Wheeling Charges and loss should be made applicable on Net Metering consumers on the total banked units for recovery of distribution infrastructure cost. These charges will be adjusted against consumption by the Eligible Consumer from the grid. The unrecovered portion of the fixed cost should be completely recovered from the Wheeling Charges and additional Charges. The sample illustration provides the Additional Charges recoverable as Rs. 1.98 per unit.

AEML submitted that if the consumer opts for supply from other Distribution Licensee under the change-over framework, the rooftop system will remain connected to the network of the Wires Licensee or even if already changed-over consumer wishes to avail the Rooftop RE generating system, he will have to apply to the Supply Licensee. The Commission has issued Practice Directions under MERC/NET METERING REG/2016/00781 dated 30 September, 2016 under the MERC Net Metering Regulations, 2015. AEML requested the Commission to specify in the Regulations that the Practice Directions issued under the erstwhile Regulations will continue to operate, to the extent not inconsistent with the proposed Regulations.

TPC submitted that any unutilised credit/banked energy should be purchased by the Distribution Licensee at applicable Generic Tariff notified by the Commission.

1.19.3 Analysis and Commission's Decision

The Commission has revisited this Clause and feels the need to clarify this Clause. It is appropriate that the Consumer be compensated for unadjusted Units as on date of leaving the system or changing the Supply Licensee. At the same time, in case of change of Supply Licensee, then a new Net Metering Agreement will have to be entered into with the new Supply Licensee, else, any energy injected in to the grid shall not be paid for. The issue of levy of other charges has been deliberated earlier in this SOR.

Further, it is clarified that the Practice Directions issued under the MERC Net Metering Regulations, 2015 will continue to operate, to the extent not inconsistent with the MERC Grid Connected RE Generating Systems Regulations, 2019.

Accordingly, the Commission has changed the Clause as under:

"11.7 In case the Eligible Consumer leaves the system or changes the Supply Licensee, the excess electricity shall be considered in the following manner:

- a) The unadjusted Units as on date of leaving the system or changing the Supply Licensee shall be compensated at the Generic Tariff, and adjusted along with the final bill settlement with the existing Supply Licensee;
- b) Any injection of electricity without entering into a new Net Metering Agreement with the new Supply Licensee shall be considered as inadvertent injection and shall not be paid for by the new Supply Licensee."

1.20 Regulation 11.8: Consumer Grievance

1.20.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"11.8 The Eligible Consumer shall have recourse, in case of any dispute with the Distribution Licensee regarding billing, to the mechanism specified by the Commission under Sections (5) to (7) of the Act for the redressal of grievances:

Provided that in case of any dispute with the Distribution Licensee with regard to implementation of Regulation 5.2 of these Regulations, the concerned Consumer Grievance Redressal Forum may take assistance on technical matters from any Independent Advisor empanelled with the Maharashtra Energy Development Agency (MEDA)."

1.20.2 Comments Received

MEDA suggested that MSEDCL has 'Consumer Grievance Redressal Forum' for dealing with consumer disputes. The same Forum may be utilised for addressing grievances of consumer in this case.

1.20.3 Analysis and Commission's Decision

The Commission decides to continue with the Draft Regulations, as the Clause is very clear that the existing Grievance Redressal framework shall be available in case of disputes.

1.21 Regulation 13.1: Energy Accounting during meter defect/failure/burnt

1.21.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"13.1 In case of defective/failure/burnt condition of any meter, the Distribution Licensee shall replace the meter as specified in the Electricity Supply Code."

1.21.2 Comments Received

MSEDCL submitted that faulty or burnt meters should be procured by the Eligible Consumer for replacement. Such meters shall be tested and installed by Distribution Licensee.

1.21.3 Analysis and Commission's Decision

The Commission is of the view that this aspect is governed by the Electricity Supply Code, wherein it is specified that if the consumer's action/inaction is responsible for the meter being burnt or defective, then the consumer has to bear the cost for the same. Hence, the Commission does not feel it appropriate to specify anything different here.

1.22 Regulation 14: Renewable Purchase Obligation

1.22.1 Proposed in Draft MERC Grid Interactive Rooftop RE Regulations, 2019

"14.1 The quantum of electricity consumed by the Eligible Consumer from the Renewable Energy Generating System under the Net Metering Arrangement shall qualify towards his compliance of RPO, if such Consumer is an Obligated Entity."

1.22.2 Comments Received

MEDA and Others suggested that the consumer investing in the RE system should have the privilege of reaping the RPO benefits if he falls under Obligated Entity. Distribution Licensee has to contribute its own share of efforts to meet the RPO obligation. It should not be made mandatory to assign entire generation for RPO compliance of Distribution Licensee. It is requested to pass on the renewable benefits from the RE systems to Consumers who might happen to be Obligated Entities or want to consume RE voluntarily to be green consumer.

Shri Sudeep Doshi and Others submitted that Solar systems will be set up at the cost of the consumer, while the Distribution Licensee will take credit from these for their RPO without paying any charge. Hence, it is requested to add provision to give some monetary credit to consumer for taking RPO benefits.

1.22.3 Analysis and Commission's Decision

This Clause has been retained in the Draft Regulations from the MERC Net Metering Regulations, 2015. The Commission is of the view that the Clause is appropriate, as the set off of consumption by the consumer through his RE generation, amounts to purchase of RE by the Distribution Licensee. Further, as stated earlier, the RPO benefit helps the Distribution Licensee to partly offset the revenue loss due to reduction of subsidising sales. Hence, no change has been made to this Regulation.
