GLOBAL OVERVIEW OF RENEWABLES IN CITIES

- 1 REN21 Policy Database (2020) and Tables R1-R5, available at www.ren21.net/cities/datapack. Data are compiled by REN21 and based on CDP-ICLEI Unified Reporting System, CDP Open Data, The Global 100% Renewable Energy Platform, Climate Action Network, C40, ICLEI, IRENA, Sierra Club, UK100 and REN21 data collection. Some research is based on voluntary reporting and may not be exhaustive. **Figure 1** and **Table 1** from Ibid; Fossil Free Divestment, "Divestment commitments overview", <https://gofossilfree.org/divestment/commitments>, viewed 14 December 2020.
- 2 Estimates for urban energy consumption vary between 56% and 78% (central estimate, 76%) of global final energy use. See the following: K. C. Seto et al., "Human settlements, infrastructure and spatial planning", in O. Edenhofer et al., eds., *Climate Change 2014: Mitigation of Climate Change. Contribution of Working Group III to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change* (Cambridge, UK and New York, NY: Cambridge University Press, 2014), https://www.ipcc.ch/site/assets/uploads/2018/02/ipcc_wg3_ar5_chapter12.pdf; International Energy Agency (IEA), "Cities are at the frontline of the energy transition", press release (Paris: 7 September 2016), <https://www.iea.org/newsroom/news/2016/september/cities-are-at-the-frontline-of-the-energy-transition.html>; United Nations Department of Economic and Social Affairs (UN DESA), *World Urbanization Prospects: The 2018 Revision* (New York: 2018), <https://population.un.org/wup/Publications/Files/WUP2018-Report.pdf>.
- 3 Seto et al., op. cit. note 2; World Bank, "Urban development", <https://www.worldbank.org/en/topic/urbandevelopment/overview>, viewed 15 November 2020.
- 4 Seto et al., op. cit. note 2; World Bank, op. cit. note 3.
- 5 United Nations Environment Programme (UNEP), *The Weight of Cities: Resource Requirements of Future Urbanisation* (Nairobi: 2018), <https://www.resourcepanel.org/reports/weight-cities>.
- 6 Greenhouse gas accounting in cities can be done using either a sector-based approach or a consumption-based approach. Both include emissions resulting from household use of fuels and electricity as well as goods and services produced and consumed *within* a city's boundaries. However, there are key differences between the two approaches. A sector-based greenhouse gas inventory also includes emissions arising from *exported* goods and services. The consumption-based approach excludes emissions from the goods and services that are exported from the city but includes emissions from *imported* goods and services. From A. A. Morini, M. J. Ribeiro and D. Hotza, "Early stage materials selection based on embodied energy and carbon footprint", *Materials & Design*, vol. 178 (September 2019), p. 107861, <https://www.sciencedirect.com/science/article/pii/S0264127519302990>; C40, *Consumption-based GHG Emissions of C40 Cities* (New York: March 2018), <https://www.c40.org/researches/consumption-based-emissions>.
- 7 IEA, *World Energy Outlook 2018* (Paris: 2018), p. 27, <https://www.iea.org/weo2018>; Renewable Energy Network for the 21st Century (REN21), *Renewables 2020 Global Status Report* (Paris: 2020), <https://www.ren21.net/gsr-2020>; ICLEI – Local Governments for Sustainability, "100% Renewables Cities and Regions Roadmap", <https://iclei.org/en/100RECitiesroadmap.html>, viewed 10 January 2021.
- 8 UN Habitat, *Habitat III Issue Papers, 22 – Informal Settlements* (New York: May 2015), https://unhabitat.org/sites/default/files/download-manager-files/Habitat-III-Issue-Paper-22_Informal-Settlements-2.0%20%282%29.pdf.
- 9 Estimate based on the fact that 4.2% of the global population in urban areas does not have access to electricity, from IEA, *SDG7: Data and Projections: Access to Electricity* (Paris: October 2020), <https://www.iea.org/reports/sdg7-data-and-projections/access-to-electricity>, and 55% of the global population (4.2 billion inhabitants) lives in cities, from World Bank, op. cit. note 3. IEA, *SDG7: Data and Projections: Access to Clean Cooking* (Paris: October 2020), <https://www.iea.org/reports/sdg7-data-and-projections/access-to-clean-cooking>.
- 10 Between 2000 and 2014, the proportion of the urban population living in slums worldwide decreased by 20%; but by 2018 it had again risen to 23.5% or 1 billion people in total, mainly in Eastern and South-Eastern Asia (370 million), Sub-Saharan Africa (238 million) and Central and Southern Asia (227 million). From UN Stats, "Make cities and human settlements inclusive, safe, resilient and sustainable", <https://unstats.un.org/sdgs/report/2019/goal-11>, viewed 11 January 2021.

- 38 For countries with no power targets or for which the share of renewable power already surpasses the highest targets, the latest available shares of renewable power are considered. Brazil's target excludes all hydropower. Canada's share excludes all hydropower. India does not classify hydropower installations larger than 25 MW as renewable energy sources, so hydro >25 MW is excluded from national targets. De facto sub-national targets have been set through existing Renewable Portfolio Standard policies. The Russian Federation's targets exclude hydropower plants >25 MW. **Figure 8** from REN21, op. cit. note 7. Data are compiled by REN21 and based on CDP-ICLEI Unified Reporting System, CDP Open Data, The Global 100% Renewable Energy Platform, Climate Action Network, C40, ICLEI, IRENA, Sierra Club, UK100 and REN21 data collection. - 82 In **North America**, the demand for electric buses continued to rise in 2019 and 2020, including in cities such as Brampton (Ontario, Canada), Gulfport (Mississippi, US) and Portland (Maine, US), which procured their first e-buses. See K. Tigue, "U.S. electric bus demand outpaces production as cities add to their fleets", Inside Climate News, 14 November 2019, <https://insideclimatenews.org/news/14112019/electric-bus-cost-savings-health-fuel-charging>, and L. Belmonte, "Electric buses are coming to this GTA city and the government's hoping it's a game changer", Narcity, 19 July 2019, <https://www.narcity.com/en-ca/news/toronto/brampton-electric-buses-aim-to-accelerate-plans-for-greener-canada>. Several cities in **Latin America** – such as Buenos Aires (Argentina), Bogota, Cali and Medellín (all Colombia), Montevideo (Uruguay), Santiago (Chile) and São Paulo and Volta Redonda (both Brazil) – made progress with integrating electric buses into public transport fleets and building EV charging stations. Santiago (Chile) has the largest electric urban bus fleet outside of China, with 452 in circulation in 2020 and plans for 1,160 more to enter operation during the year; see the following sources: Ministerio del Medio Ambiente de Chile, "Gobierno recibe 100 nuevos buses eléctricos que se sumarán a RED Metropolitana de Movilidad", 31 July 2019, <https://mma.gob.cl/gobierno-recibe-100-nuevos-buses-electricos-que-se-sumaran-a-red-metropolitana-de-movilidad>; Ministerio de Transporte de Chile, "RED sigue expandiéndose con 80 nuevos buses que comienzan a operar hoy en tres recorridos", 19 July 2020, <http://mtt.gob.cl/archivos/25794>; Ministerio de Transporte de Chile, "Duplicaremos la flota de buses Red en los próximos dos meses y reasignamos el 41% de los recorridos de Express", 26 June 2020, <http://mtt.gob.cl/archivos/25575>; Ministerio de Energía de Chile,

Colombia from the following sources: Alcaldía de Santiago de Cali, "El MIO pone en servicio la primera flota eléctrica de un Sistema Integrado de Transporte Masivo en Colombia", 10 September 2019, <https://www.cali.gov.co/movilidad/publicaciones/149414/el-mio-pone-en-servicio-la-primer-flota-electrica-de-un-sistema-integrado-de-transporte-masivo-en-colombia>; Alcaldía de Medellín, "Los 64 buses eléctricos ya están en Medellín", 17 September 2019, <https://www.medellin.gov.co/movilidad/component/k2/los-64-buses-electricos-ya-estan-en-medellin>; Alcaldía de Bogotá, "Primer bus eléctrico del SITP ya se encuentra en Bogotá", <https://bogota.gov.co/mi-ciudad/movilidad/transmilenio/buses-electricos-del-sitp-en-bogota>, updated December 2019; Transmilenio S.A., "Supply and demand statistics of the Integrated Public Transport System – SITP" (Bogotá: February 2020), <https://www.transmilenio.gov.co/loader.php?Servicio=Tools2&ITipo=descargas&IFuncion=descargar&idFile=5778>. Uruguay from Intendencia de Montevideo, "Nuevas condiciones para la renovación o incremento de la flota", 1 October 2019, <https://montevideo.gub.uy/noticias/movilidad-y-transporte/nuevas-condiciones-para-la-renovacion-o-incremento-de-la-flota>, and from Intendencia de Montevideo, "El transporte colectivo sigue cambiando", 19 May 2020, <https://montevideo.gub.uy/noticias/movilidad-y-transporte/el-transporte-colectivo-sigue-cambiando>. Buenos Aires from Ministry of Transport of Argentina, "Resolución 284-2019", 13 May 2019, <https://www.boletinoficial.gob.ar/detalleAviso/primera/207542/20190515>, and from Government of the Republic of Argentina, "Ya circulan los primeros buses eléctricos en la Ciudad de Buenos Aires", 17 May 2019, <https://www.argentina.gob.ar/noticias/ya-circulan-los-primeros-buses-electricos-en-la-ciudad-de-buenos-aires>. Brazil from the following sources: Prefeitura Municipal de Volta Redonda, "Terceiro Ônibus Do Tarifa Comercial Zero É Entregue Em Volta Redonda", 1 January 2020, <https://new.voltaredonga.rj.gov.br/24-noticias-em-destaque/gabinete-do-prefeito/2230-terceiro-%C3%B4nibus-do-tarifa-comercial-zero-%C3%A9-entregue-em-volta-redonda>; City of São Paulo, "São Paulo passa a ter a maior frota de ônibus 100 % elétricos do país", 19 November 2019, <http://www.capital.sp.gov.br/noticia/sao-paulo-passa-a-ter-a-maior-frota-de-onibus-100-eletricos-do-pais>; "E-bus radar", <https://www.ebusradar.org>, viewed 23 September 2020. In **Europe**, following successful public procurement procedures, new electric buses were put into circulation in Gothenburg (Sweden), Lisbon (Portugal), London (UK), Milan (Italy), Paris (France) and many more cities. See the following sources: Biofuels International, "Volvo receives order for electric, biodiesel buses in Swedish city", 6 November 2019, <https://biofuels-news.com/news/volvo-receives-order-for-electric-biodiesel-buses-in-swedish-city>; Mayor of London, "London's electric bus fleet becomes the largest in Europe", 5 September 2019, <https://www.london.gov.uk/press-releases/mayoral/london-has-europes-largest-electric-bus-fleet>; P. Dzikiy, "Milan to receive 250 electric buses from Solaris in one of Europe's largest e-bus orders yet", *Electrek*, 10 July 2019, <https://electrek.co/2019/07/10/milan-250-electric-buses-solaris>; Groupe RATP, "RATP Group 2018 results: A year of profitable growth and investments to the benefit of passengers", press release (Paris: 29 March 2019), <https://www.ratpdev.com/sites/default/files/annexes/communiqués/RATP%20Group%202018%20results.pdf>. Some **Asian** cities procured electric buses with the stated goal of improving air quality, including Ahmedabad, Bangalore, Delhi, Gurugam and Pune (all India) and Nur-Sultan (Kazakhstan). In 2020, Pune's public transport service provider issued a tender for the supply, operation and maintenance of 150 electric buses and associated charging infrastructure. See the following sources: SLOCAT, op. cit. note 39; A. Parikh, "Delhi to shut Rajghat thermal power project, use land for 5 MW solar park", *Mercom India*, 15 July 2019, <https://mercomindia.com/delhi-rajghat-thermal-project-solar-park>; R. Nair, "Pune announces tender for 150 electric buses under FAME-II Program", *Mercom India*, 15 September 2020, <https://mercomindia.com/pune-tender-electric-buses>; "100 Yutong electric buses delivered in Kazakhstan's capital Nur-Sultan", *Sustainable Bus*, 16 April 2020, <https://www.sustainable-bus.com/electric-bus/100-yutong-electric-buses-delivered-in-kazakhstans-capital-city-nur-sultan>.
- 83 Supra-national, national and state mandates can put pressure on cities to accelerate the uptake of EVs and build-out of EV charging infrastructure as well as infrastructure for other zero-emission vehicles such as fuel cell vehicles, thus enabling the uptake of renewable electricity and fuels. For example, in 2019, members of the EU Parliament and EU Member State representatives agreed on a new "clean vehicles" directive and targets requiring that at least a quarter of new buses purchased by public authorities in cities across Europe be "clean" by 2025, and at least a third by 2030. A "clean" light-duty vehicle is defined as any car or van meeting the following emission thresholds: until 31 December 2025: no more than 50g/km of CO₂ and up to 80% of applicable real driving emission (RDE) limits for NO_x and PN; from 1 January 2026: only zero-emission vehicles. "Clean" heavy-duty vehicle refers to any truck or bus fuelled by hydrogen, battery electric (including plug-in hybrids), natural gas (both CNG and LNG, including biomethane), liquid biofuels, synthetic and paraffinic fuels, LPG. F. Simon, "Europe agrees sales targets for 'clean' buses in cities", *Euroactiv*, 12 February 2019, <https://www.euractiv.com/section/electric-cars/news/europe-agrees-sales-targets-for-clean-buses-in-cities>; European Commission, "Clean Vehicles Directive", 8 December 2020, https://ec.europa.eu/transport/themes/urban/clean-vehicles-directive_en. In 2020, the governor of California (US) issued an Executive Order banning the sale of internal combustion engine vehicles in the state by 2035, and the California Air Resources Board announced that all commercial trucks and vans in the state must be zero emission by 2045. Washington, D.C., along with 15 US states, announced plans to follow California's lead in electrifying all heavy-duty trucks, vans and buses to reduce harmful diesel engine pollution. See J. St. John, "California to ban all internal combustion engine vehicles by 2035", *Greentech Media*, 23 September 2020, <https://www.greentechmedia.com/articles/read/california-to-ban-all-internal-combustion-engine-vehicles-by-2035>, and S. O'Kane, "15 states will follow California's push to electrify trucks and buses", *The Verge*, 14 July 2020, <https://www.theverge.com/2020/7/14/21324552/electric-trucks-buses-clean-air-zero-emissions-states>.

- 243 For example, in Norway, since 2017, it has been up to the local governments to decide the incentives regarding access to bus lanes (which are usually off-limits to private vehicles) and free municipal parking. In 2019, the Norwegian Parliament set a 50% rule under which counties and municipalities cannot charge EV users more than 50% of the full price of fares on ferries, public parking and tolls. See Norsk elbilforening, "Norwegian EV Policy", <https://elbil.no/english/norwegian-ev-policy>, viewed 25 September 2020; K. Joshi, "The electric recipe of Norway's zero emissions transport boom", *The Driven*, 10 July 2020, <https://thedriven.io/2020/07/10/the-electric-recipe-of-norways-zero-emissions-transport-boom>.
